

1. Export the Subset from AWS repository

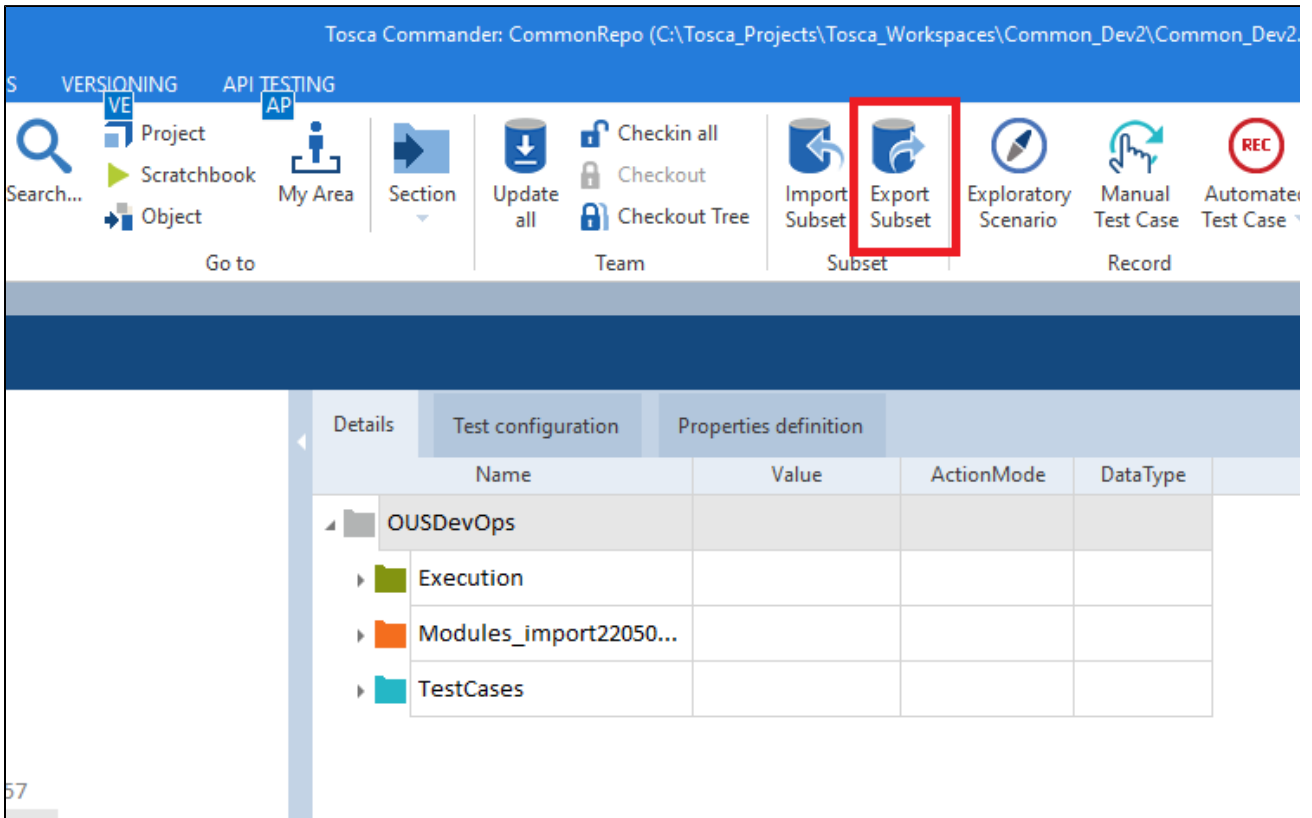

Launch the workspace in AWS repository and follow the below steps.

1. Select the component folder of the application and go to Home Menu under Main Toolbar.

2. Perform "Checkout Tree" on the folder.

3. From Home Toolbar Menu, select "Export Subset". Make sure the project component folder is selected while clicking on Export Subset button.

4. Choose a path to save the subset file. This file should be retained as a backup.
