

How to create an Azure Repo & provide access to users?

Prerequisites:

- Access to '[abbvie-devops-lab](#)' organization in Azure DevOps
- Access to the Project '[Abbvie BTS](#)'

Steps to Create a Repository:

1. Drop a mail for creation of the new repository to sasi.kumar@abbvie.com looping sachin.ks@abbvie.com and nicolas.michaud@abbvie.com.
2. To gain access to the repository, you need to raise an ServiceNOW request through the [link](#) as per the new process.
3. If not, check with **Kumar, Sasi** for getting the access.
