

# How to auto generate my test case traceability field when I create my first test execution summary ?

When the test has been run, we auto fill with the specific **naming conventions** -

- 1. Test Case Number
- 2. Name associated with the story
- 3. Test associated Test run ID
- 4. Passed/failed status

Example -

TC-141 - DMND0017140 - Site Search - Optional filters - Run ID: TR-158 - PASSED

Test Case Traceability: TC-141 - DMND0017140 - Site Search - Optional filters - Run ID: TR-158 - PASSED

Description

Some affiliates do not have medical content, other - don't have different types of categorization. We have to provide an opportunity to not to use these filters

qTest: Test Execution

Project All -

Test Run Project: BA0009701 International HCP Portal – abbviepro.com

1

HCP 2.13 Test Cycle: All Test Suite: All Status: All

Test Case	Test Case Project	Version	Status	Last Status ?
> TC-141 Test Case Covers HCP-4445 DMND0017140 - Site Search - Optional filters	BA0009701 International HCP Portal – abbviepro.com	1.0	New	PASSED

**Note** - When its not an automated process and when you are in Confluence SLC it needs to be manually entered with this specific Naming Conventions.
