How to create a Change Request (CR) Release pipeline for Production Release?

Step-by-Step Procedure

1. To create an CR Release pipeline, you need to go through the SNow DevOps Change Request Creation Training video.mp4 for understanding the purpose of the CR Release Pipeline.
2. Connect with OUS DevOps Team and get it created in their project folder.
3. Get access to the Release Pipeline.
4. Change the required fields as per the recording session and save it.
5. Trigger the Release Pipeline before the PRODUCTION deployment.
